Tom Street | Records status and follow-up (DRAFT)

Updated: October 16, 2026. **Administrative status:** Five foundational Chapter 119 requests and two supplemental drafts prepared; **no submission receipts verified for any of the seven**. An archive contains 15 internally hash-matched photo copies; their native device originals and capture chronology remain unverified.

New evidence: County GIS classifies the target Tom Street road segment as County Maintained. Individual drainage-asset ownership and maintenance still require records.

Three essential requests for County Engineering

1. Confirm whether an approved subdivision lot grading plan is on file for 2264 and 2268; if not, identify each lot's actual stamped approved grading plan or permit alternative.
2. Produce any **existing** surveyed elevations of swales, driveway/culvert inverts, roadside grade and the receiving outfall; if none are held, explain how the County will assess the drainage and identify the responsible owner/maintainer.
3. Identify the engineer of record, the inspection/certification gate before any CO, and the County's process for reviewing drainage impacts on neighboring existing homes.

Meeting follow-up record

- Commissioner / County official attending: _____
- Meeting date and location: _____
- County Engineering contact and department: _____
- County issue / inspection tracking ID: _____
- Approved design files promised and custodian: _____
- Engineering site review request and date: _____
- Records-request sent dates and receipt IDs: _____
- Written response deadline/date offered by County: _____
- Homeowner responsible for follow-up: _____

Critical caution

No code violation, measurable land elevation change, illegal lot division, drainage deficiency or construction-caused flooding has been established. Both building permits showed **Active** on captured MGO records; the assigned drainage-certification task does not establish a filed/missing/overdue document. Photos must remain private unless the owner authorizes disclosure. This is a draft, not legal or engineering advice.
