Tom Street Drainage | Homeowner Brief (Reconciled DRAFT)

October 15, 2026 | 2264 and 2268 Tom Street, Navarre, Florida; nearby established homes and roadside drainage.

Purpose

We request the approved engineering records and a documented County review of the roadside drainage during nearby construction. We **do not claim** that higher fill is automatically unlawful or that construction caused flooding. Those questions need approved plans and measured field evidence.

What the captured County records establish

Santa Rosa County Property Appraiser exports identify **2264 Tom Street** as parcel **21-2S-26-0780-0QQ00-1020** and **2268 Tom Street** as parcel **21-2S-26-0780-0QQ00-1490**, both showing Holiday Builders Inc. as owner. Captured County MGO records identify permits **BP-2026-1621** and **BP-2026-1612**, both marked **Active in October 2026**; current live status still needs checking.

An **August 6, 2026** inspection comment at 2264 directed proposed 12-inch pipe and inlet work referencing structures near 2260 and 2270 Tom Street. **August 31 and September 10** comments at 2268 mention keeping a stormwater ditch free of sediment and matching roadway grades. These are **inspector remarks**, not approved hydraulic plans or proof of installed works, elevations, capacity or easement rights.

Both permit task lists label **Certified Drainage as Built: Assigned**. This does not prove a document exists, is late, was filed, or is missing. The portal's empty attachment results likewise do not prove that the County has no approved drawings.

Documents needed

1. Approved **original and revised grading/site plans**, engineering calculations, reviewer notes, and any subdivision grading plan or authorized alternative.
2. Historic and final surveys; finished-floor, property-line and **pipe/inlet/outfall elevations**; certified as-built records where available.
3. Shared **right-of-way, ditch/culvert plans, easements and maintenance records**, including drainage complaints or corrections.
4. Current County inspection and CO/certification status; a documented **engineering field review** considering neighboring drainage effects and other possible causes.

What we ask the County to do

Identify the plan governing each lot; provide the document index and missing records; arrange a coordinated drainage inspection; and give neighbors a **named contact, tracking number, timetable and written findings**.

A separately preserved homeowner package has **15 internally hash-matched JPEG copies**, but native originals, capture times, exact parcel locations and release permissions are not verified. They remain private.

Sources: saved Property Appraiser and MGO records. No sealed drainage plans or surveyed outfall measurements have been obtained.

Draft Letter to Santa Rosa County Commissioner

Date: _____

To: **Santa Rosa County Commissioner**

Re: Request for County engineering review and coordinated drainage response near 2264 and 2268 Tom Street, Navarre

Dear Commissioner:

I am a nearby homeowner concerned about how ongoing construction and existing roadside drainage interact along Tom Street. I respectfully request your assistance in ensuring that County Engineering and Development Services review the matter together and provide residents a documented response.

The records available to us identify **2264 Tom Street** (parcel **21-2S-26-0780-0QQ00-1020**, permit **BP-2026-1621**) and **2268 Tom Street** (parcel **21-2S-26-0780-0QQ00-1490**, permit **BP-2026-1612**). Both permits showed **Active** in the October 2026 records we captured. County inspection comments mention planned pipe and inlet work near other Tom Street addresses, maintenance of the stormwater ditch, and matching roadway grades. We have not received the approved engineering drawings or measurements needed to evaluate the completed drainage.

Our concern is that any changes to lot grading, roadside conveyance or outfalls should be assessed for their effects on established neighboring homes. **We are not asserting that a law was violated or that either project caused flooding.** A higher new lot elevation, by itself, cannot answer those questions.

We respectfully ask your office to help arrange:

1. A named **County Engineering contact** and a coordinated review of both permits and the shared roadside drainage.
2. Production of the **approved grading/drainage plans**, revisions, survey and stormwater information applicable to each lot, including any subdivision-level plan.
3. A documented **field inspection**, with consideration of existing neighboring residences, driveway/culvert inverts, drainage outfall, verified road-maintainer and drainage-asset responsibilities, and any verified adverse impacts.
4. A **written summary of findings**, a tracking/reference number, and a clear follow-up timetable identifying any action needed and the responsible entity.

We understand that engineering judgments require actual plans, field measurements and qualified staff. Our request is simply that the relevant facts be examined before the issues become harder to document.

Thank you for your attention to our neighborhood.

Respectfully,

Name: _____

Residential address: _____

Phone / email: _____

DRAFT for homeowner review and signature. Not sent. Supporting brief, MGO inspection summaries, and separate Chapter 119 request drafts are available in the Tom Street investigation.

Draft Homeowner Letter | Tom Street Drainage Review

Date: _____

To: **Santa Rosa County Development Services and County Engineering/Public Works**

Re: Records request and coordinated drainage review, 2264 and 2268 Tom Street, Navarre, Florida

Dear County Staff:

As a neighboring homeowner, I request the approved drainage records and a coordinated field review for recent construction at **2264 and 2268 Tom Street**. We are concerned about roadside drainage and its effect on established homes. This is a request for facts and an engineering assessment, **not an allegation of a code violation or wrongdoing**.

The County's captured MGO records identify **BP-2026-1621** at 2264 Tom Street (parcel **21-2S-26-0780-0QQ00-1020**) and **BP-2026-1612** at 2268 Tom Street (parcel **21-2S-26-0780-0QQ00-1490**). Both were marked Active when saved in October 2026. Inspection notes refer to proposed roadside pipe/inlet work, protection of a stormwater ditch, and matching roadway grades. The notes do not establish approved designs, final installation, actual elevations or drainage capacity.

Under Chapter 119, Florida Statutes, please provide the following existing records for *each* permit in the electronic formats maintained by the County, with all revisions:

1. Approved site/lot-grading and stormwater plans, engineering calculations, subdivision master grading plan (if any), approval conditions and review correspondence.
2. Preconstruction and final topographic/boundary surveys, finished floor/perimeter elevations, driveway/culvert/inlet specifications, invert elevations and receiving outfalls.
3. Erosion controls, inspection reports, engineer of record, licensed contractor, required sealed certifications/as-builts and CO status.
4. Shared Tom Street right-of-way/ditch plans, easements, road-maintainer and asset-acceptance records, ownership, maintenance logs and drainage complaints/corrective-action records.

Please confirm **whether a subdivision lot grading plan was on file**, which approved plan or permit pathway applies to each lot, and the actual status of the **Certified Drainage as Built** tasks. An MGO task labeled *Assigned* does not itself tell us whether a document is missing or overdue.

We also request a **documented County Engineering inspection** of the shared roadside drainage, a written finding on actual outfalls and potential effects on established homes, and verification of Tom Street's road-maintainer and drainage-asset responsibilities.

Please acknowledge this request, provide a tracking number and point of contact, allow rolling production, and estimate any substantial fees before incurring them. If any record is withheld, please identify the applicable statutory exemption and release nonexempt portions.

Respectfully,

Name: _____

DRAFT for homeowner review and submission. No public-records request submission receipt has been verified.

Tom Street | Proxy meeting notes (reconciled draft)

Opening (read aloud):

I am speaking on behalf of neighboring residents concerned about drainage along Tom Street near the new construction at 2264 and 2268. We are here to request documents and a coordinated engineering review, not to accuse anyone of wrongdoing.

The County's saved permit data identifies **BP-2026-1621 at 2264 Tom Street** and **BP-2026-1612 at 2268 Tom Street**. Both were marked Active when the records were captured. Inspector comments reference roadside drainage, proposed pipe and inlet work near the 2260 and 2270 street addresses, and a direction to match existing roadway grades. We have not obtained the approved plans, surveyed elevations, installed-pipe measurements, or capacity calculations, so those remarks cannot tell us whether drainage is adequate.

Both permit task lists have an item called **Certified Drainage as Built**, marked **Assigned**. The saved task status alone is not proof of an absent or late document or a violation.

Questions to request on the record:

1. Can County Engineering provide the approved grading and drainage plans, with all revisions and calculations, for each lot?
2. Is a subdivision lot-grading plan on file, and what exact approval or alternative applies?
3. What are the roadside/driveway pipe and inlet invert elevations and outfalls? Who maintains Tom Street's road and drainage structures?
4. Will County Engineering document a site inspection and review potential changes to runoff reaching nearby existing homes?
5. Who will provide the written response, document index, and follow-up schedule?

Closing:

We are asking for transparent engineering records and a measured answer while work is still under way. Higher fill by itself does not establish a violation, and a passed inspection by itself does not prove the whole drainage system is adequate. We want the facts confirmed and any necessary correction identified by the proper professionals.

If challenged: The records support the questions, not a determination of fault. We have not established flooding causation, negligence, an easement violation, or an unacceptable stormwater design.

Handling instruction: Use the revised homeowner brief. Do not distribute the earlier PDF packet as a final document, and do not show unredacted portal captures or personal photos without permission.

Tom Street | Records status and follow-up (DRAFT)

Date: October 15, 2026. **Administrative status:** Five foundational Chapter 119 requests and two supplemental drafts prepared; **no submission receipts verified for any of the seven**. An archive contains 15 internally hash-matched photo copies; their native device originals and capture chronology remain unverified.

Three essential requests for County Engineering

1. Confirm whether an approved subdivision lot grading plan is on file for 2264 and 2268; if not, identify each lot's actual stamped approved grading plan or permit alternative.
2. Provide or arrange the surveyed elevations of swales, driveway/culvert inverts, roadside grade and positive outfall, plus who owns/maintains the shared structures.
3. Identify the engineer of record, the inspection/certification gate before any CO, and the County's process for reviewing drainage impacts on neighboring existing homes.

Meeting follow-up record

- Commissioner / County official attending: _____
- Meeting date and location: _____
- County Engineering contact and department: _____
- County issue / inspection tracking ID: _____
- Approved design files promised and custodian: _____
- Engineering site review request and date: _____
- Records-request sent dates and receipt IDs: _____
- Written response deadline/date offered by County: _____
- Homeowner responsible for follow-up: _____

Critical caution

No code violation, measurable land elevation change, illegal lot division, drainage deficiency or construction-caused flooding has been established. Both building permits showed **Active** on captured MGO records; the assigned drainage-certification task does not establish a filed/missing/overdue document. Photos must remain private unless the owner authorizes disclosure. This is a draft, not legal or engineering advice.
