Homeowner Evidence Intake Checklist

This is a short intake form for gathering the one category of evidence that **cannot be obtained from any government system**: your own dated observations and photographs.

Please keep the originals. Do not crop, rotate, edit, re-save, or send them through messaging apps that recompress images. Those apps strip GPS, timestamps and camera metadata, which is often the only thing that makes a photograph useful later.

What to collect

#	Item	Why it matters	Notes
1	Photographs of standing or flowing water at the 2265 / 2264 / 2268 frontage	Establishes that a condition occurred at a place	Date, time, where in frame
2	The same view from a **second** vantage point (different angle, or the same spot from a second day)	Distinguishes a one-off from a recurring pattern	Two angles is much stronger than one
3	Photographs of the **roadside ditch / swale**, especially any sediment, vegetation blockage, or where it appears to stop	Directly tests the "roadway and stormwater ditch" the inspector referenced	Get close-ups and a wide shot
4	Photographs of the **2264 driveway construction**, including any open trench, pipe, or inlet box	Bears directly on whether the inspector's direction was followed	Date each shot
5	Photographs of the **2260 and 2270 drainage structures** (the concrete ends referenced by the inspector)	These are the tie-in points	Include a scale reference — a coin or a tape
6	Photographs of **new impervious surfaces** (driveways, roof downspouts, patios) as they appear	Relevant to runoff volume	Wide shot plus close-up
7	Photographs showing the **outlet point** — where ditch water actually goes	Tests positive outfall	Note if it's a swale, culvert, or unclear
8	A short written note per event: **what you saw, where, what time, how long it lasted, whether it was raining, and whether it had rained recently**	Observations without context are weak	Separate note per event

Metadata to preserve

For every photo and video, please record alongside it:

- **Date and time** of capture (confirm from the file's own metadata)
- **Device** used
- **Location** — which lot frontage or structure

- **Weather** — was it raining, and had it rained in the previous few hours?

What we will do with it

- Keep the **original files untouched**, with a SHA-256 hash recorded for each.
- Create clearly labelled **derivatives** only if needed for sharing.
- Record the **capture date** and the **date we received it** as separate fields.
- Never post your photographs publicly without your say-so.

Please do not

- Delete or "clean up" the originals after sharing
- Retouch, brighten, crop, or annotate the originals — we can derive annotated copies
- Post them in a public group or on social media without checking with us first
- Approach the builder or the neighbouring owners directly about this yet

Photo / event log

Fill in and return with the files.

Reminder for the record: nothing in this repository has yet established that water on any of these lots came from the new construction, that any code was violated, or that the drainage is inadequate. Photographs and dated observations are how that question gets answered properly rather than by argument. They also help us separate ordinary seasonal conditions from a real change.
