Tom Street Drainage — Homeowner Brief

2264 Tom Street (parcel 21-2S-26-0780-0QQ00-1020) and **2268 Tom Street** (parcel 21-2S-26-0780-0QQ00-1490), Navarre, FL 32566 Prepared 16 October 2026 · All figures below were checked against county records on **15–16 October 2026** and are current only as of that date.

What this is

A factual summary of what Santa Rosa County's own public permit records say about two new houses being built next door on Tom Street, and what those records do **not** yet tell us.

We are neighbours, not engineers or lawyers. Nothing here is a legal opinion, a drainage calculation, or an accusation. Where a question is unanswered, we say so plainly.

1. What we verified

Both lots are owned by Holiday Builders, Inc. (Santa Rosa County Property Appraiser official roll).

Two building permits are active right now:

Address	Parcel	Permit	Status	Issued	Size
2264 Tom St	21-2S-26-0780-0QQ00-1020	**BP-2026-1621**	Active	23 Mar 2026	2,704 sq ft
2268 Tom St	21-2S-26-0780-0QQ00-1490	**BP-2026-1612**	Active	23 Mar 2026	2,312 sq ft

Permit applicant on both: **Amy Riddle, Holiday Builders INC**.

A correction worth knowing. Earlier information circulating about these addresses — including what appears in property listings — had the two parcel numbers **swapped**, and attached a recorded deed from a *different* house (2274 Tom St) to 2268 Tom St. The numbers above are from the county's official Property Appraiser roll and are the correct ones.

The environmental picture. Neither lot is in a mapped flood zone. Both sit in FEMA **Zone X** (area of minimal flood hazard) on FIRM panel 12113C0587H. Zone X does **not** mean water never stands in the street ditch — regulatory flood mapping does not measure local roadside ponding.

2. What county inspectors actually wrote

These are the words of Santa Rosa County inspectors, taken verbatim from the county permit database.

2264 Tom Street — driveway review, 6 August 2026 (passed):

> *"Use 100 ft of 12 inch ADS perforated pipe with sock; Tear out existing concrete end @ address 2260 and tie into with new pipe; Install 1st inlet box @ roughly halfway; Tear out existing concrete end @ address 2270 and install an inlet box; call for Pre-pour inspection when ready"*

This is the most useful sentence we found. It shows the 2264 driveway was designed to **connect into drainage structures on the neighbouring lots at 2260 and 2270**, using 12-inch perforated pipe and at least one inlet box.

2268 Tom Street — pre-construction grading and drainage, 31 August 2026 (passed):

> *"Site passes. Ensure that roadway and stormwater ditch remain free of construction sediment."*

This confirms the county inspector saw an existing **roadway and stormwater ditch** along the Tom Street frontage.

2268 Tom Street — driveway review, 10 September 2026 (passed):

> *"Flat; Match Existing roadway Grades"*

The 2268 driveway was directed to be set level and to follow the existing road surface.

What these comments are not. They are an inspector's instructions recorded during construction. They are **not** an approved engineering drawing, not a survey, not a measurement of how much freeboard the driveway has, and not proof of what was actually installed in the ground.

---

3. The most important finding

On **both** permits, the county still has an open task called:

> ***"Certified Drainage as Built" — status: Assigned***

Both permits also still show `Site Grading / Drainage (mid-construction)` and `(final construction)` inspections as **Not Complete**, `Driveway Final Inspection` as **Not Complete**, and **`Issue CO` as Assigned** — meaning no Certificate of Occupancy has been issued for either house yet.

Why that matters. Santa Rosa County's Land Development Code § 4.04.01.D.1 requires, for a lot under one acre, that the **engineer of record provide a signed and sealed letter certifying the lot grading plan was built in conformance** — *at substantial completion and prior to Certificate of Occupancy*.

In other words: **the sealed engineer's drainage certification does not exist yet for either lot, and cannot exist until the houses are finished.**

What this is not. It is **not** a finding that anything is wrong. Both permits are Active and this is the ordinary sequence for a house under construction. It is flagged because it means the final, sealed answer to "was this lot graded as approved?" has not been produced yet — and that is precisely the document we want to receive before the houses are finished.

---

4. What we could not obtain

We searched the county's public permit portal. It returns **zero** attached documents for either permit — no site plan, no grading plan, no survey, no as-built. This does **not** mean the County lacks them; it means they are not published.

We have therefore prepared five formal public-records requests. **None has been sent yet** — that needs the homeowner's authorisation.

The single most important unanswered question:

> ***Does the County Engineering Department already have a subdivision lot grading plan on file for these two lots?***

That answer decides which legal path the County itself required here — a sealed engineer's lot grading plan, or an individual Environmental Resource Permit from Northwest Florida Water Management District. Nobody has answered it yet.

---

5. A note on the neighbours at 2260 and 2270

Because 2264's driveway ties into the drainage structures on those two lots, their records matter to us. Both of their driveway-connection permits failed inspection more than once before finally passing — 2260 twice, 2270 three times. Both were later closed out as complete.

This is **not** evidence of a problem at 2264 or 2268. It is background: it shows the roadside drainage connections on this stretch of Tom Street have not always been straightforward.

---

6. What we are asking for

1. The **approved grading plan and site plan** for both lots.
2. The **sealed engineer's drainage certification** when it is issued.

3. Confirmation of the **outfall and invert elevations** for each driveway.
4. The **roadway profile** — crown and shoulder elevations — for this block.
5. A **field walk** of the finished drainage by the County and the engineer.
6. A written **maintenance assurance** for the roadside ditch and the shared inlet boxes.

Items 1 and 2 are the ones that matter most. Asking for them now, while both permits are still open, is far more effective than asking after the houses are finished and the certificates are gone.

Honest bottom line

We have solid, verifiable county records on **who owns the lots, what permits are open, what the inspectors wrote, and what the County's code requires.**

We do **not** have the approved grading plans, the surveys, the as-builts, any field measurements, or any photographs of the water we have seen. Until we do, **we cannot say whether the drainage at 2264 and 2268 is adequate.** We are not going to guess, and we are not going to say anything has been done wrong when the record simply does not tell us yet.

Next step is a short, factual conversation — with the County, and with the engineer who signs the drainage certification.

Prepared from official Santa Rosa County Property Appraiser and MGO Connect permit records retrieved 15–16 October 2026, FEMA National Flood Hazard Layer data, and the Santa Rosa County Land Development Code (official PDF dated 13 January 2026).
