Tom Street | Records status and follow-up (DRAFT)

Date: October 15, 2026. **Administrative status:** Five public-records requests drafted, **no submission receipts verified**. An archive contains 15 internally hash-matched photo copies; their native device originals and capture chronology remain unverified.

Three essential requests for County Engineering

1. Confirm whether an approved subdivision lot grading plan is on file for 2264 and 2268; if not, identify each lot's actual stamped approved grading plan or permit alternative.
2. Provide or arrange the surveyed elevations of swales, driveway/culvert inverts, roadside grade and positive outfall, plus who owns/maintains the shared structures.
3. Identify the engineer of record, the inspection/certification gate before any CO, and the County's process for reviewing drainage impacts on neighboring existing homes.

Meeting follow-up record

- Commissioner / County official attending: _____
- Meeting date and location: _____
- County Engineering contact and department: _____
- County issue / inspection tracking ID: _____
- Approved design files promised and custodian: _____
- Engineering site review request and date: _____
- Records-request sent dates and receipt IDs: _____
- Written response deadline/date offered by County: _____
- Homeowner responsible for follow-up: _____

Critical caution

No code violation, measurable land elevation change, illegal lot division, drainage deficiency or construction-caused flooding has been established. Both building permits showed **Active** on captured MGO records; the assigned drainage-certification task does not establish a filed/missing/overdue document. Photos must remain private unless the owner authorizes disclosure. This is a draft, not legal or engineering advice.
